## Product Description

### Seamless Rainbow Holographic PET Lamination Film For 15 Micron Wet Lamination Process

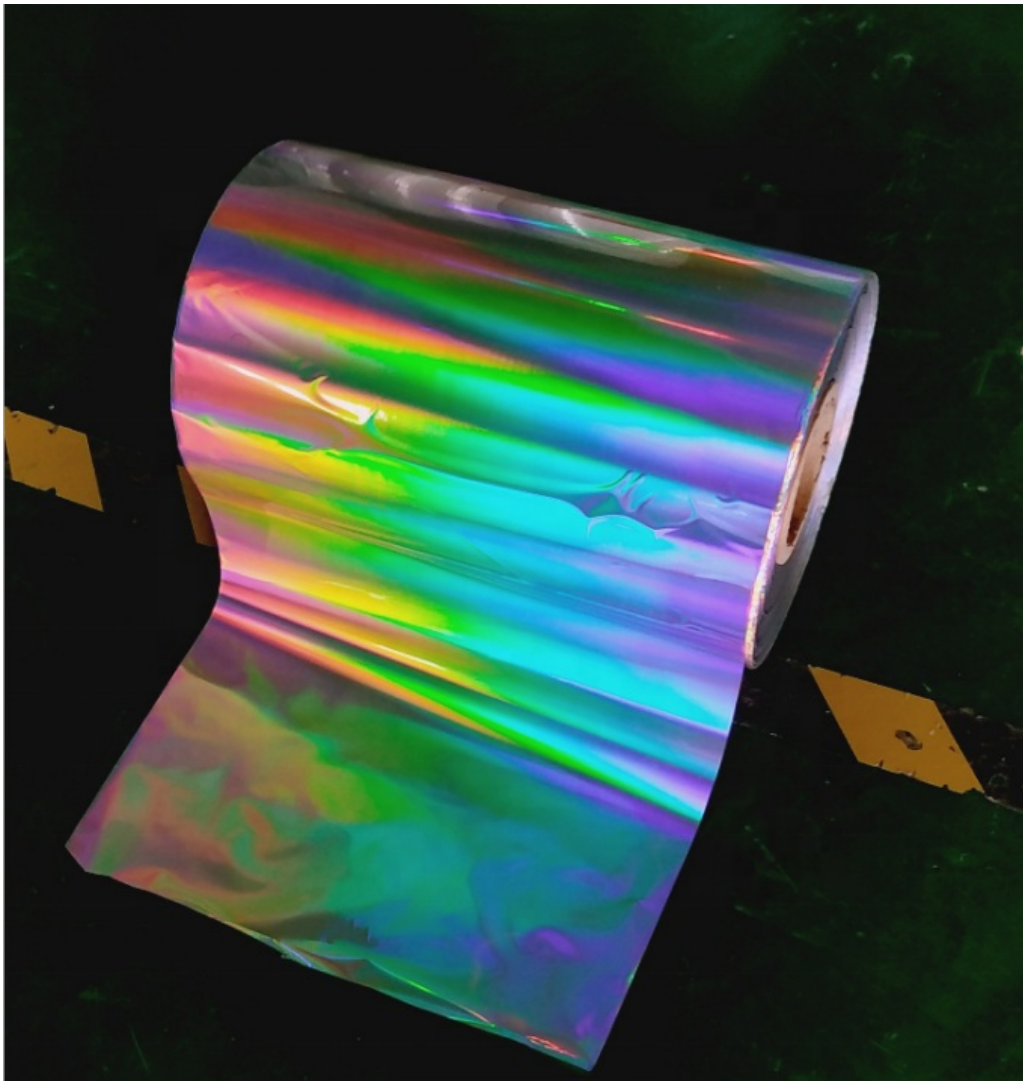

#### Q: What is seam and why is seamless more desirable?

A: Due to the technical restriction of traditional production method, some line or dots appear on the film repeatedly in every certain distance. The seams are useless and may affect the effect of the film. True seamless offered by ZXholo.com, however, can achieve true seamless, speedier production and less wastage. [Click here to See demonstration](#)

<b>Speedier:</b>	Production speed is 2-3 times faster than that of ordinary holo film/normal seamless film, resulting in higher production rate, shorter lead time and quicker response to market. Both your company and we can better plan for production schedule and utilize production capacity.
<b>Smoother:</b>	Unnecessary to handle in seam line. Disturbance to production and fine-tuning of machine are minimized when there is no seam, thereby increasing your efficiency and reducing integrated cost.
<b>Saving:</b>	The price of true seamless is more competitive with a sharp increase in production efficiency. On the other hand, elimination of seams leads to lower scrap rate, your material consumption and inspection cost can be saved. Time-saving for better utilization of production capacity. (See demonstration)
<b>Storage Flexibility:</b>	With freer specification and standardization, there is no need for multiple storage and hence minimizing inventories. Warehouse cost is saved. (See demonstration)
